## **DETAILED ACTION**

## Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, drawn to a planar waveguide having refractive index lowering molecules at its periphery, classified in class 385, subclass 130.
- II. Claims 11-16, drawn to a method for manufacturing a planar waveguide using dopant layers and subsequent thermal processing, classified in class 65, subclass 386.
- III. Claims 17-26, drawn to a polymer waveguide using fluorinated polymer material selected from certain groups, classified in class 385, subclass 142.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the method (invention II) is not restricted to the product (invention I) since other planar waveguide can be made using the method, the specific features of invention I not necessarily resultant from the method.
- 3. Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions. For example, invention I is related to a planar waveguide

Application/Control Number: 10/026,806

Art Unit: 2874

having refractive index lowering molecules at its periphery. On the other hand, invention III is related to a polymer waveguide using fluorinated polymer material selected from certain groups.

- 4. Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are functionally different. For example, invention II a method for manufacturing a planar waveguide using dopant layers and subsequent thermal processing. On the other hand, invention III is related to a polymer waveguide using fluorinated polymer material selected from certain groups.
- 5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
